BIO

Junior Full-Stack Developer specializing in the MERN stack, with hands-on experience building production systems in manufacturing environments and developing AI-driven web applications. Strong focus on backend architecture, API design, and building scalable, real-time systems.

PROJECTS

Trading BOT 11/2025 – Present | Klaipeda, Lithuania

Designed and deployed an event-driven trading automation system integrating real-time market data, news scraping, and strategy-based execution logic, reducing manual market analysis workload by **80%**.

- Architected a modular backend and **Firestore** data model supporting **multi-user** trade lifecycle and execution workflows.
- Integrated external **APIs (IG Markets, TwelveData)** for real-time data ingestion and automated trade execution.
- Built **real-time monitoring** and **alerting system** with trading signal detection and **Telegram**-based notifications.
- Developed full-stack dashboard with **Firestore Auth**, live market visualization, analytics, and deployed on **AWS**.

Cook assistant App 07/2025 – 11/2025 | Klaipeda, Lithuania

Built client-facing interactive cooking assistant, Integrated real-time 3D rendering (**Blender/CC4**), **voice recognition**, and **AI-driven** response logic within a **MERN**-based web application.

- Developed a **Node.js/Express** backend integrating **OpenAI API** to process voice input, detect recipe intent, and fetch matching data from a **MySQL** database.
- Built an interactive **React** frontend with **real-time conversation** display, session controls, and **dynamic UI** state management.
- Integrated a 3D virtual assistant using **Three.js**, synchronized with voice output to create a conversational user experience.
- Implemented voice recognition using **browser APIs** to enable hands-free interaction and real-time recipe guidance.

WORK EXPERIENCE

Gretin - Tangier, Software developer 02/2023 – 11/2023 | Tangier, Morocco

- Enhanced manufacturing systems for **Lear Corporation**, implementing pressure chamber controls and improving user access management using **Node.js**, **Express.js**, **Electron.js**, and **Java**.
- Refactored a legacy Java application using the **Factory design pattern**, reducing validation errors and stabilizing production exports.
- Developed and maintained **REST APIs** for industrial systems, supporting real-time operations for production workflows.

- Led onboarding and mentored 5 junior interns using **Agile** concepts, improving code quality and reducing recurring development errors by ~30%.
- Jacob Delafon**, *Software developer internship* 01/2022 – 03/2022 | Tangier, Morocco

- Designed and implemented a **C#** Windows Forms application to replace a legacy production system.
- Built and integrated **SQL Server** backend for reliable data storage and cross-department access.
- Conducted **testing** and **deployment**, ensuring system stability and usability across production and quality teams.
- Improved cross-department data exchange efficiency, reducing task completion time by **20%**.

SKILLS

Primary Stack
Node.js, Express.js, React, MongoDB, Firebase

Other Languages
Java, C#, C

Databases
MySQL, SQL Server

Tools & DevOps
Git, Docker, Linux, CI/CD, Jenkins (basic), Bash

Core Computer Science
OOP, Data Structures & Algorithms, Design Patterns

EDUCATION

Bachelor's degree in computer science, 2024 – present | Klaipeda, Lithuania
Klaipėdos valstybinė kolegija

Technician Diploma in IT Development, *Institute Ciel* 2020 – 2022 | Tangier, Morocco

CERTIFICATES

freeCodeCamp — • JavaScript Algorithms and Data Structures Certification [↗](#)

LANGUAGES

Arabic: Native, **English:** Fluent, **French:** Advanced, **Spanish:** Basic, **Lithuanian:** Basic

INTERESTS

Software engineering, fitness, game development, financial markets
